

An integral high strength threaded pipe connection formed on joints of plain-end pipe, and a method for manufacturing, wherein the ends of the joints are rough machined, swaged, and then finish machined, preferably but not necessarily, with only one chucking.

1. *Protein synthesis* is the process by which the genetic information encoded in DNA is used to produce a specific protein. This process involves the transcription of DNA into messenger RNA (mRNA) and the subsequent translation of mRNA into a polypeptide chain.
